On November 4, 2003, the Commission issued an *Order and Further Notice of Proposed Rulemaking* establishing a redistribution control content protection system for digital broadcast television.¹ This system includes compliance and robustness rules for Covered Demodulator Products which permits digital broadcast television content to be output in one of several ways, including via digital outputs protected by an Authorized Digital Output Protection Technology or to an Approved Recording Method.² The Commission also adopted an interim approval process for digital output protection technologies and recording methods.³ As a part of this process, on January 23, 2004, the Commission issued a Public Notice commencing an initial certification window.⁴ In that Public Notice, the Commission indicated that following close of the initial certification window it would issue a second Public Notice identifying the certifications received and initiating a twenty (20) day period for comments or oppositions.⁵

The Commission has not yet undertaken a substantive review of the certifications identified above, makes no representation to the completeness thereof, and reserves the right to dismiss or take other appropriate action with respect to any certification that contains insufficient information to evaluate the appropriateness of the underlying digital output protection technology or recording method.⁶

When to file. Comments or oppositions must be filed during the relevant twenty (20) day window. Comments or oppositions filed before the relevant window opens or after it closes will be returned.
